

Are you affected by Hypalon® supply issues?

On April 20th 2010, DuPont Performance Elastomers ceased operations of its Hypalon® business, in line with the announcement they made in early 2009.

Further details can be found on: <http://www.hypalon.com>

With no direct replacement offered by DuPont, manufacturers across industries as diverse as inflatable boats, escalator handrails and cable insulation have been faced with serious supply issues, affecting their production output and material costs.

It should be no surprise that Hypalon® was so widely utilised if you consider its performance when exposed to high temperatures, oxidising chemicals as well as its resistance to weather (UV, Ozone etc.), flex cracking and abrasion.

This has been more than evident in our industrial roller business, where Just Rollers, for many years, have been supplying Hypalon® covered rollers to our world-wide customer base for a wide variety of applications. We will be able, using alternative suppliers, to offer you equivalent compounds for your current applications.

In addition, you will also be pleased to know that, using our in-house technical knowledge and experience in rubber compounding, we also have available products, whose properties far exceed those of standard Hypalon®.

These unique roller coverings marketed under the brand names of [Super Dynamic™](#) and the recently released [Ultra Dynamic™](#) are bringing to both current and new customers improved high temperature performance, improved productivity and most of all improved profitability.

If you would like to find out for yourself how Just Rollers can resolve your Hypalon® supply issues, as well as provide improvements in your process, then please call one of our team now.
